

Novel Spatial Audio Scenes Classical Music for Surround

Kathryn Beresford

Institute of Sound Recording, University of Surrey, UK

Classical Music for Surround

- Growing consumer acceptance of multichannel audio
- DVD-Audio and Super Audio CD are mainstream commercial media
- Music-only releases are taking advantage of the developments
- Classical commercial releases often maintain traditional recording practices
- Creative opportunities are often avoided

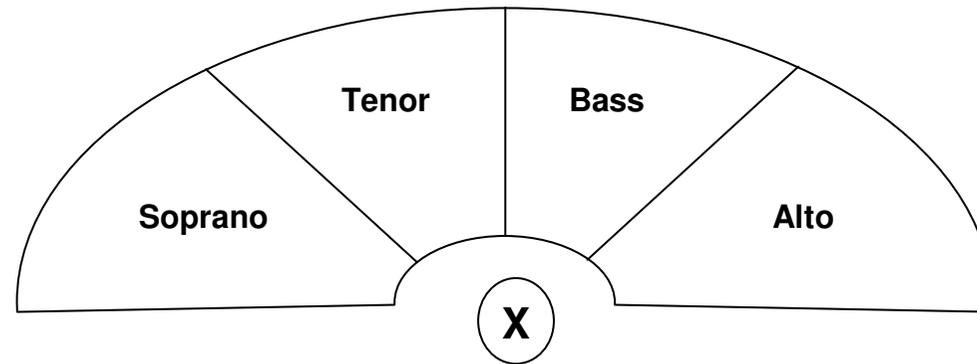

Novel Spatial Audio Scenes

- Listener opinions were sought for novel spatial audio scenes
- Series of specially made recordings
- Traditional spatial microphone arrays
- Alternative artist arrangements
- Formal listening test

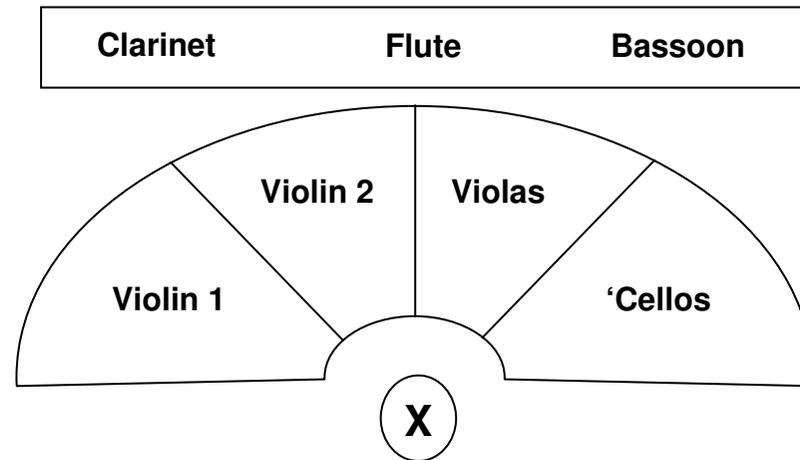

Traditional Setup - Choir

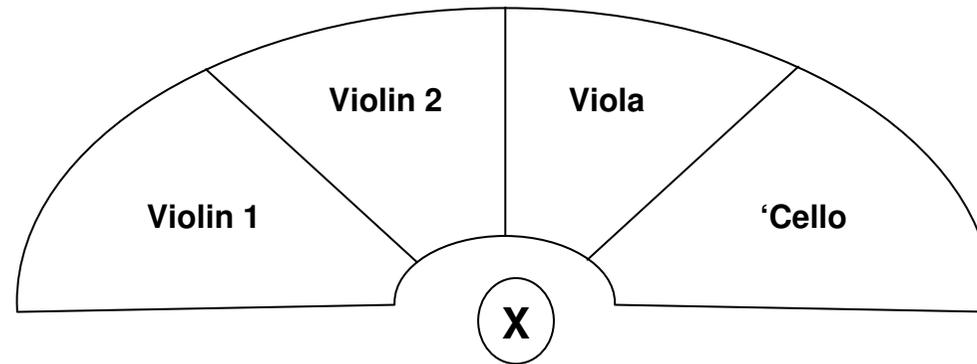

Traditional Setup – Chamber Orchestra

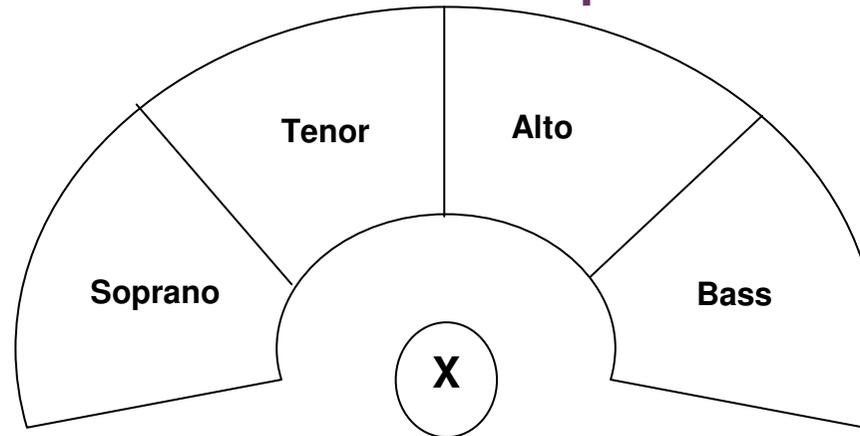

Traditional Setup - Quartet

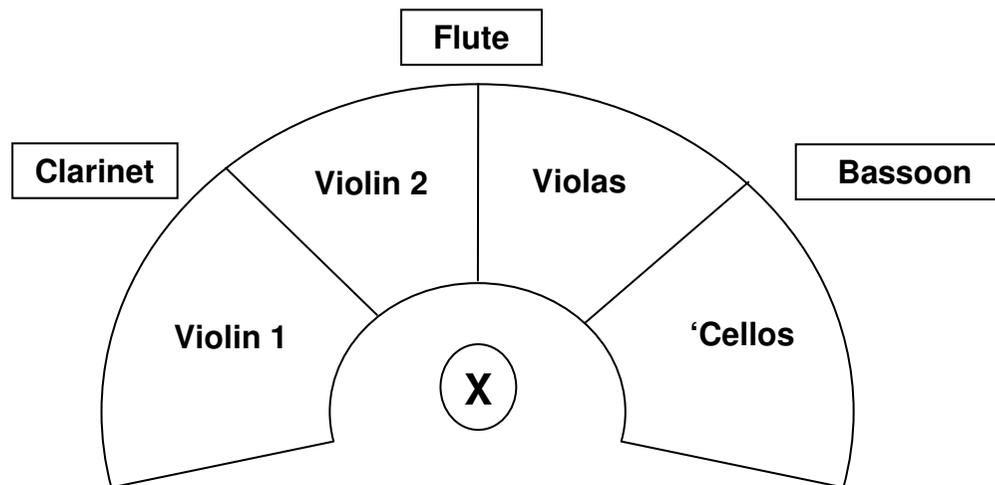

Partial Arc Setup - Choir

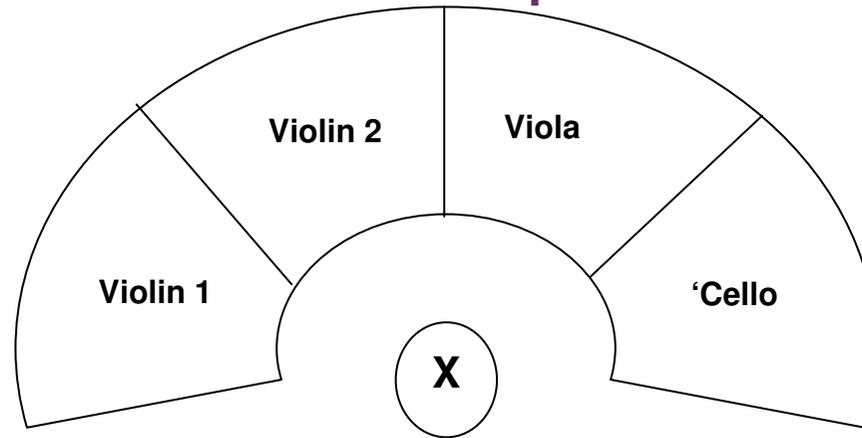

Partial Arc Setup – Chamber Orchestra

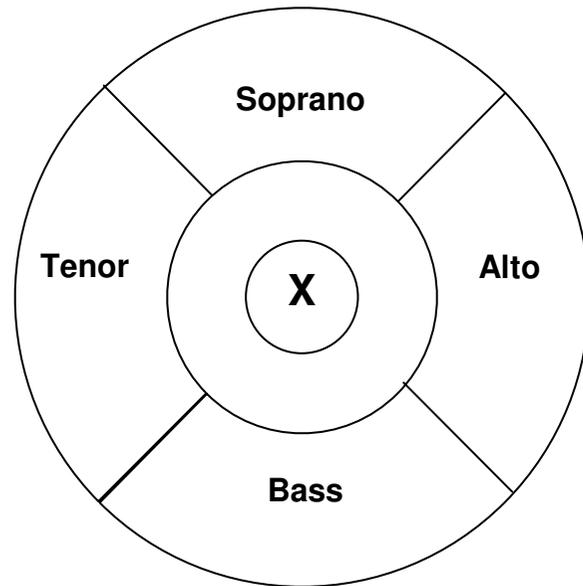

Partial Arc Setup - Quartet

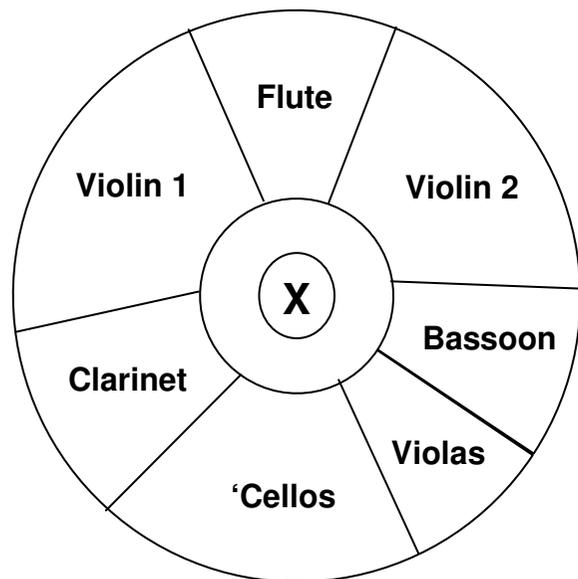

Full Surround Setup - Choir

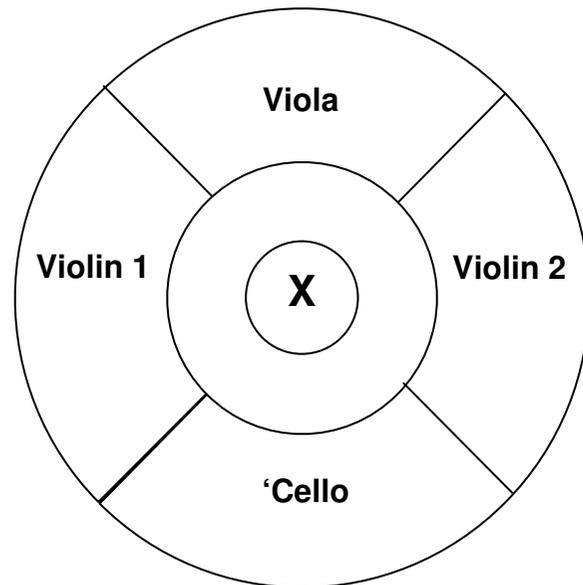

Full Surround Setup – Chamber Orchestra

Full Surround Setup - Quartet

Listening Test

- 30 listeners (15 trained/15 naïve)
- IOSR, University of Surrey
- *5.0* loudspeaker setup
- 3 types of programme material
- 2 microphone arrays
- 3 artist arrangements (traditional, partial & full)

Listening Test

- 8 assessment attributes
- Accompanying statements and descriptions
- 9-point Likert Scale

Strongly Agree

Agree

Neither agree
nor disagree

Disagree

Strongly disagree

Attributes

Purchasing – (disregarding the programme material)

I would like to purchase this recording to listen to at home.

Listening Comfort – would you feel comfortable to listen to the recording for a long period of time?

Listening to this recording is a comfortable experience.

Attributes

Tradition – in comparison with recordings previously experienced at home

This recording is traditional in terms of its recording concept.

Interest

I find elements of this recording interesting.

Attributes

Envelopment – do you feel surrounded by the audio?

I find this recording enveloping.

Naturalness – is it like being in a concert hall with the musicians? Or does it feel like an artificial experience?

I find this recording natural.

Attributes

Instrument locatedness

It is easy to pinpoint the location of instruments in this recording.

Timbral Balance – is the bass, middle and treble content well balanced? Is the frequency spectrum pleasing?

The recording has a good timbral balance.

Question Design

Listening Comfort

“Listening to this recording is a comfortable experience.”

Trial 36

A

Strongly Agree

Agree

Neither agree

Disagree

Strongly disagree

B

Strongly Agree

Agree

Neither agree
nor disagree

Disagree

Strongly disagree

C

Strongly Agree

Agree

Neither agree
nor disagree

Disagree

Strongly disagree

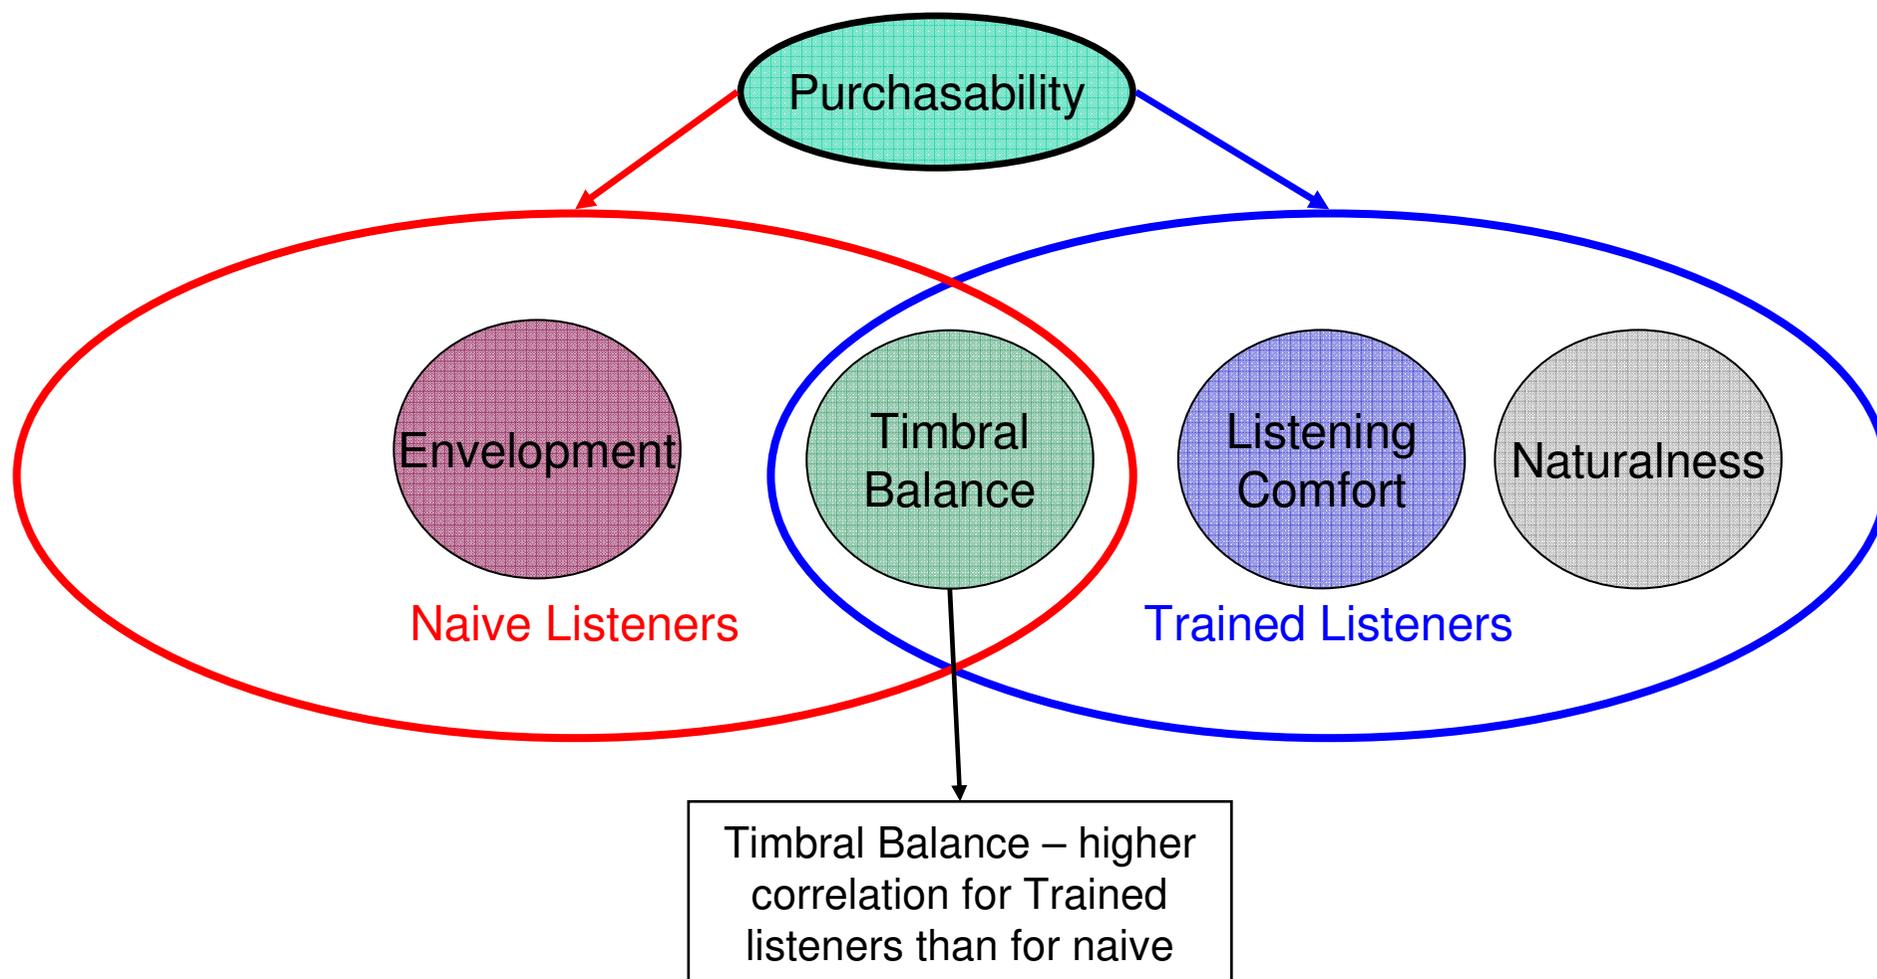

Results

- Preliminary analysis suggested division of naïve and trained listeners
- Programme Material and Artist Arrangement:
 - Purchasability – significant interaction for naïve but not trained listeners
 - Timbral balance – significant interaction for trained but not naïve listeners

Correlation Analysis

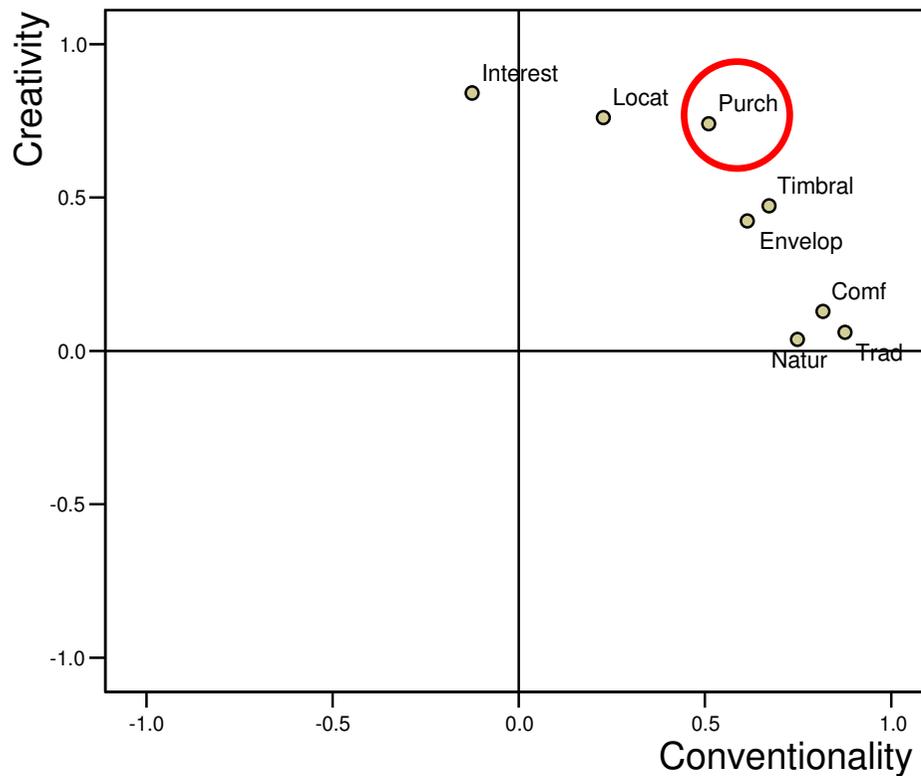

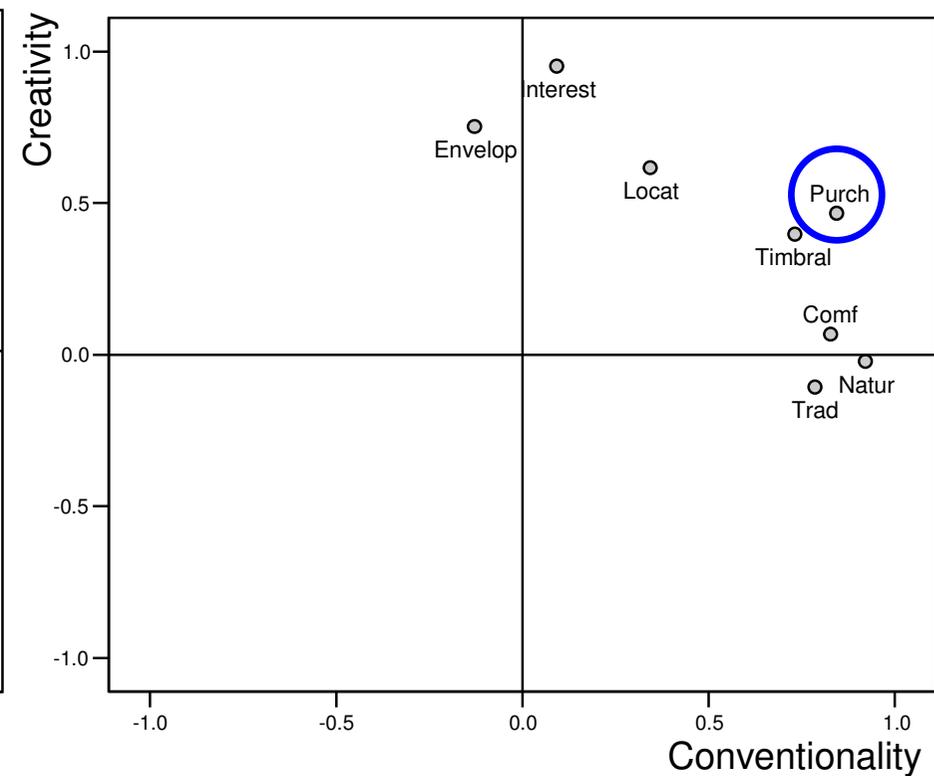

Factor Analysis

- Extracted components:

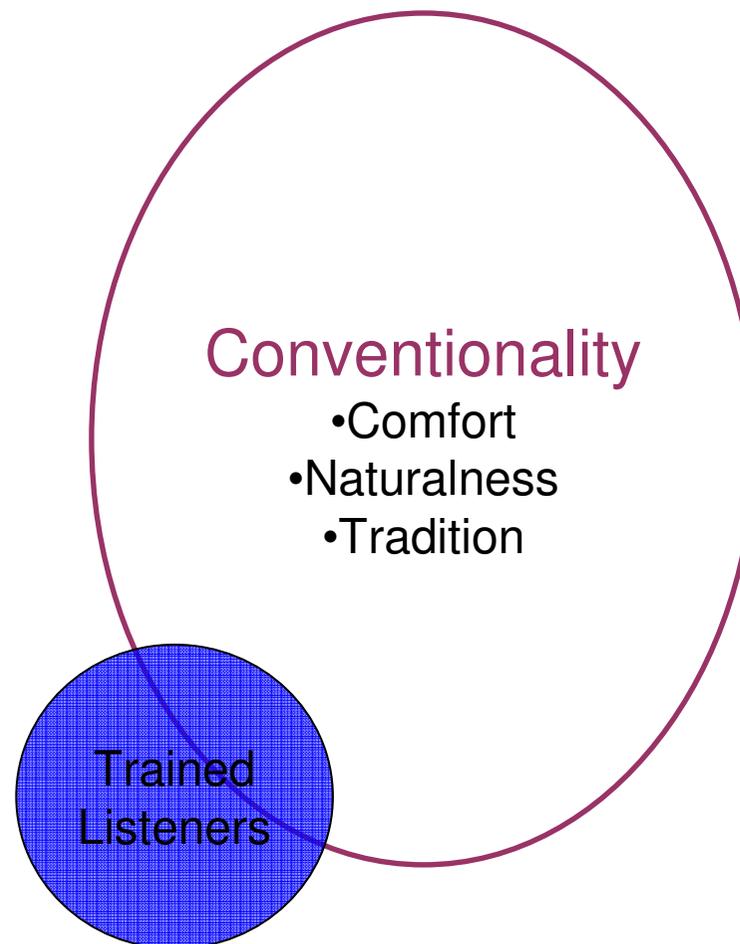

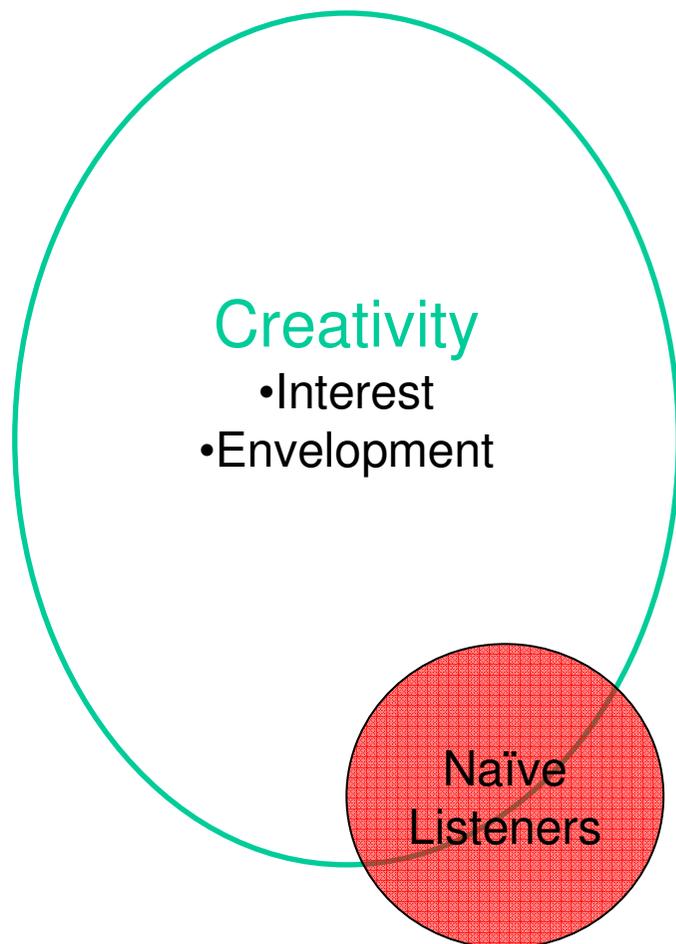

Conventionality and Creativity

Component Plot for Naïve Listeners

Component Plot for Trained Listeners

Forming Prediction Equations

$$\text{Purchasability} = 0.556 \times \text{Envelopment} - 0.531$$

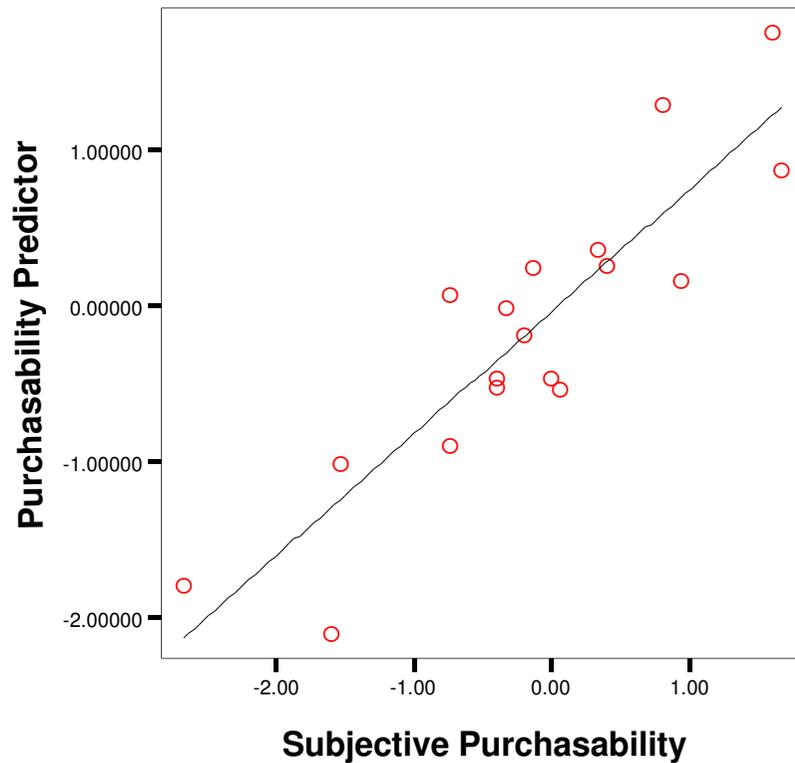

Purchasability Predictor - Naïve listeners

$$\text{Purchasability} = 0.742 \times \text{Locatedness} + 0.534 \times \text{Naturalness} + 0.576 \times \text{Timbral} - 0.573$$

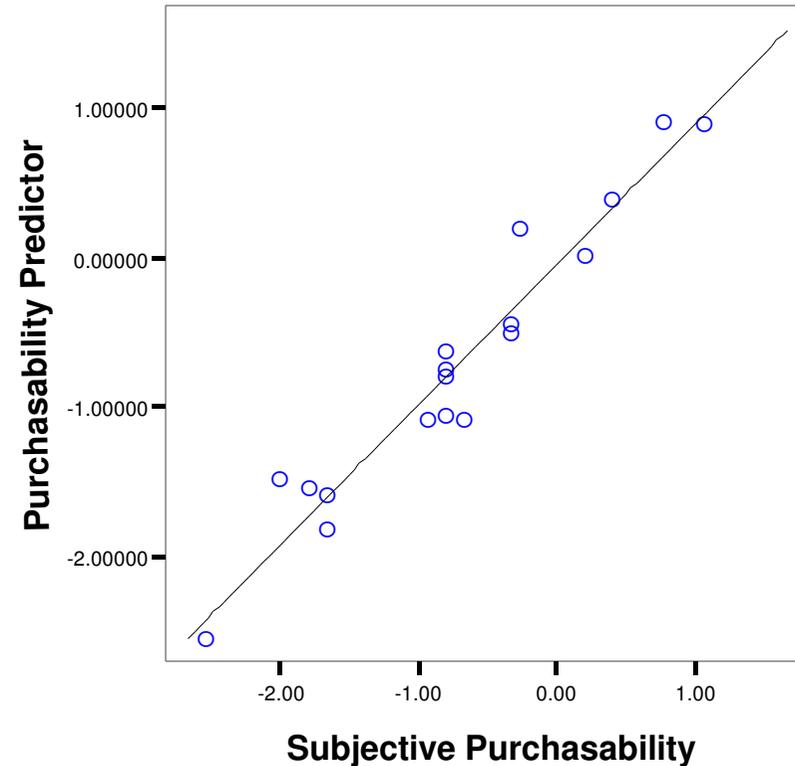

Purchasability Predictor - Trained listeners

Subjective vs. Predicted Purchasability

Naïve Listener Correlation: Subjective vs Predicted Purchasability

Trained Listener Correlation: Subjective vs Predicted Purchasability

Conclusions

- Novel recording method developed
- Listener opinions gauged for a variety of attributes
- Purchasability of recordings was related to components labelled Conventinality and Creativity
- Predictor equation formed for Purchasability for both naïve and trained listeners

Further Work

- Refinement of technique – both with regards to recording design and listening test design
- Implementation of purchasability predictor to enable shorter listening tests
- Enable establishment of the viability of unusual recording techniques within the consumer market
